email: rw@nematode.wustl.edu and jes@sanger.ac.uk

NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one mil subclone.

For a graphical representation of this cosmid sequence and its analysis see: http://www.wormbase.org/db/seq/sequence?name=C06A8;class=Sequence

# NEIGHBORING COSMID INFORMATION

The 5' cosmid is B0228, 750 bp overlap. Actual start of this cosmid is at base position 1 of C06A8; actual end is at 38570 of C06A8.

### NOTES:

Coding seqences below are the result of integration and manual review of the following data: computer analysis using the program Genefinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yuji Kohara (http://www.ddbj.nig.ac.jp/c-elegans/html/CE\_INDEX.html) and The C. elegans Orgeome cloning project (http://worfdb.dfci.harvard.edu/), similarity to other proteins from BlastX analyses (http://blast.wustl.edu/), sequence conservation with C. brigsae using Jim Kent's WABA alignment program (Genome Research 10:1115-1125, 2000), individual C. elegans GenBank submissions, and personal communications with C. elegans researchers. trNAs are predicted using the program trNAscan-SE (Lowe, T.M. and Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964). /product="Hypothetical protein C06A8.7"

The length in codons is given for each CDS.

INPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a
                                                                                                                                                                                                                                                                                                                                                                                                 (URL, http://www.sanger.ac.uk/Projects/S_pombe)
Protein coding regions (CDS) have been predicted with the help of
computer analysis using the Genefinder program in PomBase (an ACEDB
database) with additional predictions for the branch-acceptor sites
supplied by the program Sp3splice. CAUTION: It is possible that for
any individual CDS we may have underestimated or overestimated the
number of introns/exons or we may not have chosen the correct
splice donor/acceptor sites.
CDS are numbered using the following system eg SPAC5H10.01c. SP (S.
pombe), A (chromosome 1), c5H10 (cosmid name), .01 (first CDS), c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       alpha-glucosidase; escl; methylenetetranydrorolate reductase;

The clone was isolated from a sfl1 cDNA library which was prepared using soybean immature flowers. MTHFR plays a role in the synthesis of methionine. The present sequence is used in the construction of a chimeric gene to alter the level of tetrahydrofolate metabolism enzymes in plants. The enzyme may provide target to facilitat design and/or identification of inhibitors that may be useful as herbicides. The polynucleotide is also useful as a source of probes for genetically and physically mapping the genes and as markers for traits interest that may be useful as a source of probes for genetically and physically mapping the genes and as markers for traits

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a cDNA clone wlm96.pk047.14 encoding 5,10-methylenetetrahydrofolate reductase (MTHFR). The clone was isolated from a wlm96 cDNA library which was prepared using wheat seedlings obtained 96 hrs. after inoculation with E. graminis. WTHFR plays a role in the synthesis of methionine.

The present sequence is used in the construction of a chimeric gene to after the level of tetrahydrofolate metabolism enzymes in plants. The enzyme may provide target to facilitate design and/or identification of inhibitors that may be useful as herbicides. The polynacleotide is also useful as a source of probes for genetically and physically mapping the genes and as markers for traits linked to the genes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a novel method of estimating the susceptibility of an individual to a developmental disorder using genetic and environmental variables. The method can be used in the diagnosis, prevention and treatment of disorders such as schizophrenia, spina bifida cystica, Tourette's syndrome, bipolar illness, autism, conduct disorders, attention deficit disorder, obsessive computative disorder, chronic multiple tic syndrome and learning disorders such as dyslexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Diagnosing a developmental disorder, e.g. schizophrenia, by forming datasets (DS) of genetic (e.g. genotypes of folate metabolism alieles) and environmental variables affecting an individual and then comparing these DS with reference DS -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Page 114-115; 156pp; English.

It may be used for the construction of DNA probes which may be used for the identification of sequence abnormalities in patients with severe or mild MTHFR deficiency. The resulting probe may also be used in gene therapy to produce the MTHFR protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human methylene:tetra:hydro:folate reductase cDNA probe - for detection of sequence abnormalities in methylene:tetra:hydro:folate reductase e.g. in cardiovascular, neurological or folic acid metabolism disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Methylene-tetrahydrofolate-reductase; MTHFR; gene therapy; cardiovascular disease; neurological disease; folic acid metabolism; EC-1.5.1.20; enzyme; ss.

The invention relates to a non allele-specific antisense nucleic acids, which binds to methylenetetrahydrofolate reductase (MTHFR; EC 1.5.1.20) nucleic acids and inhibits MTHFR protein expression in a mammal. MTHFR catalyses the NADPH-linked reduction of 5,10-methylenetetrahydrofolate 5-methylenetetrahydrofolate, a co-substrate for methylation of
                                                                                                Disclosure;
                                                                                                                                          New antisense nucleic acids, which are methyleneretrahydrofolate reductase inhibitors, useful for treating, stabilizing or preventing cancer, e.g. breast carcinoma, colon carcinoma, colorectal carcinoma
                                                                                                                                                                                                         WPI; 2001-638509/73.
